Natural Gas Prices: LNG Hubs, Shipping & Trading

Natural Gas Prices: LNG Hubs, Shipping & Trading

Natural Gas is consistently increasing its share in the Global Energy mix. Growing environmental concerns and regulatory efforts for a decrease of carbon footprint signal the coming Age of Gas. Natural gas is slowly but steadily becoming fully commoditized. For us to be able to follow how this process unfolds, we need to understand gas pricing mechanisms, and what differentiates gas prices from one region to another.

In this talk, the speaker will provide overview of how natural gas is priced, and how the geographical source of the molecules affects the price. In particular he will introduce the following topics:

- Brief history and explanation of Natural Gas hubs around the world
- How geography of supply and demand markets generate the increasing need for LNG
- Transportation of liquefied natural gas: Shipping LNG
- Examples of various trading options, capturing the price differential throughout the world

5th CHC-E TEK Lecture

Thursday, 8th of November 2018

Program

16:30 Welcome note

16:35 Lecture: Natural Gas Prices

17:35 Discussion

18:00 Closure / Discussion

On Line Registration (before 06.11.2018):
